NanaWall Showcases Patent-Pending FoldFlat Technology to Eliminate Protruding Panels *Flat-Folding Technology Opens More Space*

SAN FRANCISCO, CA – [NanaWall Systems](#), the industry leader in opening glass wall systems, introduces the industry-first [FoldFlat®](#), which allows folding glass wall panels to stack and fold flat against the wall, completely out of the way.

“Standard opening glass walls protrude onto the deck or patio space because they can only stop halfway,” said NanaWall Systems CEO Ebrahim Nana. “With NanaWall FoldFlat, we have invented a solution for builders and homeowners to gain back that living space by folding the panels entirely against the wall.”

Available in both aluminum and wood-framed options, the patent-pending NanaWall FoldFlat allows glass door panels to fold and pivot all the way back to against the adjacent wall, which is useful for patios, decks, and balconies where space is a premium.
