NanaWall Systems introduces industry-first individual panel shade solution for opening glass walls

SAN FRANCISCO, CA – [NanaWall Systems](#), the pioneer of the opening glass wall industry, continues to expand the category by introducing the first integrated shade solution for operable glass wall panels. For years, traditional shades have only been available to cover the entire wall, hiding the folding glass wall completely and allowing very little flexibility in how much or how little light is let into the home. NanaWall Shades, designed specifically for NanaWall, are custom fitted to each panel and provide ultimate control of sun exposure and homeowner privacy, without losing the aesthetic of the NanaWall.

“NanaWall Shades give homeowners complete flexibility in how they control their environment. Not only can you open and close our glass panel walls depending on the weather and temperature, you can now easily control the amount of light entering your home by adding shades to one or all of your panels,” said NanaWall CEO Ebrahim Nana.

Available for all NanaWall folding and sliding glass walls, the NanaWall Shades’ suspended system design gives homeowners control to use them top down, bottom up, or in-between. NanaWall Shades have been custom-designed and tailored to easily snap in place and match any of the more than 25 glass wall systems NanaWall offers.

A number of profile and fabric color choices are available to accommodate any design style and they work with any new or existing NanaWall glass wall system. The patent pending quick and easy installation means no tools are required.

Homeowners can also easily customize how much light each room gets by choosing transparent, semi-transparent, or room-darkening shade fabrics. Profile colors come in a matte finish and include White Aluminum, Jet Black, Traffic White and Gray Brown. Special colors are available upon request to match any design aesthetic.
