NanaWall expands sill options for its SL60 and SL80 folding glass wall systems
Five sill options provide flexibility and versatility, ensuring performance

SAN FRANCISCO – [NanaWall Systems](#), the pioneer of the opening glass wall category, continues to provide more options for its SL60 and SL80 folding glass wall systems by offering five sills—Higher Weather Performance Sill, Hybrid Sill, Low Profile Saddle Sill, Flush Sill and Surface Mounted Sill. These sill choices provide flexibility to builders, architects and designers when it comes to building requirements for their projects.

“By designing, engineering and manufacturing every part of our glass wall systems, we’re able to maintain unmatched control of the sills’ compatibility with our folding glass wall systems, leading to unparalleled performance,” said Ebrahim Nana, CEO of NanaWall Systems. “For instance, our Higher Weather Performance Sill is so precise that a builder can spec hard wood flooring right up to the glass wall.”

The key features of each sill option include:

- The **Higher Weather Performance Sill** is the most weather-resistant option. It is thermally broken for insulation performance and energy efficiency, and may be installed flush at the interior floor with outswing units.
- The **Hybrid Sill** is a combination of two sill options, with one side flush and the other side a low-profile saddle design. It can be used with both inward- and outward-opening units.
- The **Low Profile Saddle Sill** is the most popular sill offered for the SL60 and SL80 systems, and is thermally broken for insulation and energy efficiency. An optional partial or full insert is available for ADA compliance.
- The **Flush Sill** is ideal for interior or protected exterior applications where water-intrusion performance is not required. An optional insert may be specified for this sill in order to meet the requirements of ADA compliance.
- The **Surface Mounted Sill** is ideal for interior applications and rests above the subfloor for easier installation. For ADA compliance, an insert and adjustable flanges are available.

The NanaWall SL60 is a thermally broken, aluminum folding glass wall system offering narrow profiles for clean-lined aesthetics.

The Hybrid Sill is a combination of two sill options, with one side flush and the other side a low-profile saddle design, that can be used with both inward- and outward-opening units.

About NanaWall Systems

For over 30 years, NanaWall Systems has pioneered the category of opening glass wall systems. The company has earned the trust of architects, builders, design professionals and homeowners as a custom solution for re-imagining how buildings, people and the elements interact. By combining precision engineering and outstanding design options throughout more than 25 unique award-winning systems, NanaWall Systems advances design possibilities beyond the conventional for almost any space. NanaWall Systems is headquartered in the San Francisco Bay Area with 24 showroom and design studio locations across North America.
