**Cero by NanaWall achieves STC 43 sound rating for interiors**  
*ADA compliant Flush Sill is the shallowest in the  
large panel minimal sliding glass wall industry*

**SAN FRANCISCO** – NanaWall, the pioneer of the opening glass wall category, announces that its [cero](#)<sup>®</sup> system has achieved an STC 43 sound rating for interiors. Its ADA compliant Flush Sill is the shallowest available in the large panel minimal sliding glass wall category, making it optimal for interior construction.

“Cero’s Double Glazed option combined with the Flush Sill has been tested and achieved STC 43, which makes it the perfect design choice for interior applications requiring acoustical privacy, such as conference rooms,” said NanaWall CEO Ebrahim Nana. “It offers a clean vanishing aesthetic with the ability to install inserts between the tracks that beautifully match the surrounding finished flooring.”

With panel heights up to 13 feet 1 inch (4000 mm), cero creates floor to ceiling minimally framed sliding glass walls that lend themselves to the contemporary and flexible designs of today’s modern workplace and home. Open corner conference room designs are also possible.

Cero offers a motorized option allowing the large panels to be operated and securely locked with a simple touch of a button. The automation feature provides effortless and quiet operation.

This system features the largest panes of glass available from NanaWall and is available in either double-glazed (compatible with all four sills) or triple-glazed options (Higher Weather Performance Sill only) depending on thermal performance needs. It offers pure architectural minimalism through its clean, uniform and ultra-thin lines for maximum light-filled spaces that connect the interior to the exterior for both commercial and residential applications.

Cero is offered in 50 standard colors with over 200 colors available in powder coat and anodized finishes; custom-matched colors and simulated wood effects are also available.
