**NanaWall showcases its largest customizable screen
with patented braking system**

Fully retractable screen provides ventilation, insect protection and UV resistance

SAN FRANCISCO – NanaWall Systems, the pioneer of the opening glass wall category, announces its largest screen option available for its sliding glass wall systems: Screen ONE XL. It is a minimally framed, fully retractable and non-pleated screening option with a patented braking system designed for large openings to provide an enhanced indoor/outdoor experience for homeowners.

“Through Screen ONE XL, homeowners can keep their glass walls open with a screen that offers minimal sightlines, yet still keep bugs and strong sunlight from spoiling their entertainment,” said NanaWall CEO Ebrahim Nana.

Installing screens reduces air conditioning use during milder months and increases ventilation in the evenings to keep interiors cooler by allowing air flow. Screen ONE XL features a patented, ultra-strong UV resistant fiberglass mesh that is reinforced with a wire tension system. This system provides a transparent-yet-tough barrier between homeowners and outdoor irritants, while still facilitating fresh air and other innumerable benefits of the outdoor experience.

With the use of double installation Screen ONE XL is also Open Corners Possible, which allows screens to meet in the corner and enables open-air patios and porches to provide a year-round option for outdoor entertaining. The screen easily slides in place when needed and stacks away when not in use. The low profile track and patented Flush Handle Braking System allows the screen to stop in any position for partial closures when entertaining, without fear of rolling backward. The screen is also entertaining-proof—if a guest or family member accidentally walks into the screen, the screen can easily be placed back in the single track with minimal effort.
