

Nate Cotterman Glass is proud to showcase The AQUILA lighting system at the AD Show 2019! The AQUILA is part of our adaptive lighting system concept created to enhance the relationship between designer and artisan glass blower, allowing freedom to customize elements in an otherwise standard sourcing environment.

AQUILA Module

The adaptive lighting concept allows designers to create the solution, instead of them typically needing to find their solutions. The systems are grounded in finished pieces to represent the artist's design direction; then the possibilities open up from there.
